

Spring Core :

1. Annotation based
2. XML based

Spring Boot:
Annotation based

IOC Container --> ApplicationCOntext

@SpringBootApplication

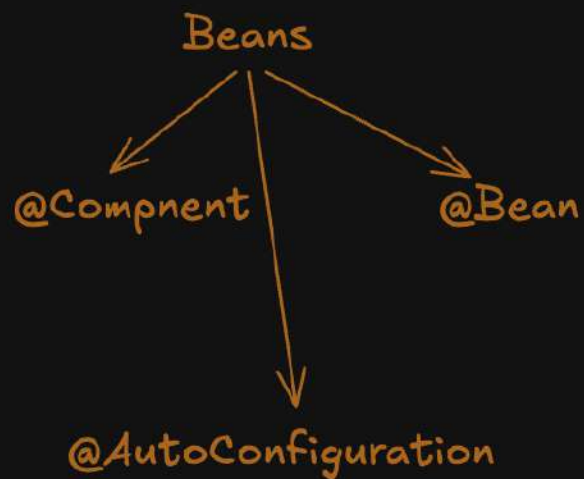

@SpringBootConfiguration
@EnableAutoConfiguration
@ComponentScan

@SpringBootConfiguration = @Configuration

@ComponentScan

@EnableAutoConfiguration

Look at my project and create any beans seem important to you.

```
@Configuration
class A {

    @Bean
    public User getUser() {
        return new User();
    }
}
```

```
@AutoConfiguration  
class B {
```

```
    @Bean  
    public User getUser() {  
        return new User();  
    }  
}
```

Maven --> pom.xml

spring-boot-starter-web (web app)

```
class webclassA {  
}
```

```
class webClassB {  
}
```

```
@AutoConfiguration  
@ConditionalOnClass(WebClassA.class)  
class A {
```

```
    @Bean  
    @ConditionalOnMissingBean  
    public WebClassA getWCA() {  
        return new WebClassA();  
    }  
}
```
